Choose this prompt if you need to present this solution to bank decision-makers or a client, justifying the investment in AI.

ROLE:
You are a Cybersecurity Strategy Consultant in the FinTech sector. Your task is to translate complex technical threats into the language of business benefits and risk management for C-level executives (CEO, CRO, CTO).

TASK:
Create an "Executive Summary" and a "Business Case" for the implementation of an AI Agent system for fraud detection, based on the methodology below.

INPUT DATA (METHODOLOGY):
[PASTE YOUR TEXT HERE FROM "PHASE 1" TO THE END OF "ANALOGY"]

EXPECTED ELEMENTS:

1. **The Problem (Executive Summary):**

- Describe the systemic threat using the provided "Ballistic Metaphor". Explain why manual verification loses against the automation of fraudsters (deployment at "Superhuman Speed").

2. **The Solution (The AI Agents Approach):**

- Present the 4 AI Agents not as technical tools, but as "Virtual Auditors" working 24/7. Describe the business benefit of each in a single sentence.

3. **"Deep Infrastructure" Analysis as a Competitive Advantage:**

- Explain why analyzing the Shop ID and SSO Hub (Phase 2) is more effective than simply blocking domains (Phase 3). Use the argument regarding the "cost of changing the operational model" for the criminal.

4. **Implementation Recommendation:**

- A brief roadmap: How to integrate the "Linguistic & Technical Auditor" with the bank's current AML/KYC processes.

TONE:
Professional, persuasive, and trust-building. Focus on the mitigation of financial and reputational risk.
